

SUJITH E

Aspiring AI Systems Engineer | Software Developer

Coimbatore, Tamil Nadu, India | sujith0718@gmail.com | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Computer Science undergraduate who builds full-stack and AI-powered applications with JavaScript, Python, and the Gemini API. Comfortable across the stack, from REST API design in Flask to prompt-engineered features deployed on Google Cloud Run. Shipped five independent projects outside coursework, including an AI productivity tool built under hackathon deadline pressure. Currently strengthening data structures and algorithms fundamentals while continuing to build real, working software.

EDUCATION

B.E. Computer Science and Engineering — PSG College of Technology, Coimbatore

2025 – 2029

Relevant coursework: Data Structures & Algorithms, Object-Oriented Programming, Full-Stack Development, AI Fundamentals

Higher Secondary Education — Bethel Matriculation Higher Secondary School, Ambur

2024 – 2025

TECHNICAL SKILLS

Languages: Python, JavaScript, C, TypeScript (Basic)

Web & Backend: HTML5, CSS3, Node.js, Express.js (Basic), Flask, REST API Development, JSON

AI & Cloud: Google Gemini API, Prompt Engineering, Google AI Studio, Google Cloud Run

Tools & CS Fundamentals: Git, GitHub, Postman, VS Code, Data Structures & Algorithms, Object-Oriented Programming

FEATURED PROJECTS

The Last-Minute Life Saver AI — Hackathon Project | *React, TypeScript, Node.js, Google Gemini API, Google Cloud Run*

- Built an AI-powered productivity assistant that helps overwhelmed users prioritize tasks and generate recovery plans under deadline pressure, using the Google Gemini API for real-time recommendations.
- Applied prompt engineering to turn raw task input into structured, actionable priority plans; deployed the full application on Google Cloud Run for live demo access.

[GitHub ↗](#) [Live Demo ↗](#)

Bookstore Management REST API | *Python, Flask, REST API, JSON, Postman*

- Designed and built a RESTful API with modular, OOP-based architecture, implementing full HTTP method routing and JSON request/response handling for book inventory management.
- Validated all endpoints in Postman to confirm correct status codes, error handling, and response structure.

[GitHub ↗](#)

Node.js Web Server | *Node.js, JavaScript*

- Built a custom HTTP server from Node.js core modules capable of serving HTML, CSS, JavaScript, images, and JSON, without relying on a framework.
- Implemented routing, redirects, custom 404 handling, and request logging via EventEmitter.

[GitHub ↗](#)

Student Compass | *HTML, CSS, JavaScript, LocalStorage*

- Built a student guidance platform delivering semester roadmaps and progress tracking for first-year engineering students, with data persisted via LocalStorage.

[GitHub ↗](#) [Live Demo ↗](#)

Class Information System | *HTML, CSS, JavaScript, LocalStorage*

- Built a classroom management dashboard with CRUD operations, search and filtering, exam countdowns, and persistent LocalStorage-backed data.
